

[Download Free Solver For Excel Mac](#)

The screenshot displays an Excel spreadsheet titled "Production Examples.xlsm" with a Solver Parameters dialog box open. The spreadsheet contains the following data:

Allocation Problem 2 (Multi-period)

Minimize the cost of operating 3 different types of machines while meeting product demand over a week's time. Each machine has a different cost and capacity. There are a certain number of machines available for each type.

Information on machines

	Initial cost per day	Additional cost per product	Products per day (Max)	Number of machines
Alpha-1000	\$200	\$1.00	40	8
Alpha-2000	\$275	\$1.80	60	5
Alpha-3000	\$325	\$1.90	85	3

Number of machines to use

	Monday	Tuesday	Wednesday	Thursday	Friday
Alpha-1000	8	8	8	8	8
Alpha-2000	5	5	5	1.666667	0
Alpha-3000	3	3	3	3	3

Number of products to make per day

	Monday	Tuesday	Wednesday	Thursday	Friday
Alpha-1000	320	320	320	320	320
Alpha-2000	300	300	300	100	0
Alpha-3000	255	255	255	255	255
Made	875	875	875	675	575
Carry-over	0	275	350	225	175
Total	875	1150	1225	900	750
Demand	600	800	1000	725	750

Maximum number of products that can be made

	Monday	Tuesday	Wednesday	Thursday	Friday
Alpha-1000	320	320	320	320	320
Alpha-2000	300	300	300	100	0
Alpha-3000	255	255	255	255	255

Cost

	Monday	Tuesday	Wednesday	Thursday	Friday	Total
Cost	\$5,294.50	\$5,294.50	\$5,294.50	\$4,017.83	\$3,379.50	\$23,280.83

Solver Parameters Dialog Box:

- Set Objective: Total_cost
- To: Max Min Value Of: 0
- By Changing Variable Cells: Machines_used, Products_made
- Subject to the Constraints:
 - Alpha1000s_used <= Alpha1000s_available
 - Alpha2000s_used <= Alpha2000s_available
 - Alpha3000s_used <= Alpha3000s_available
 - Machines_used = integer
 - Products_made <= Maximum_products
 - Total_made >= Demand
- Make Unconstrained Variables Non-Negative
- Select a Solving Method: Simplex LP
- Solving Method: Select the GRG Nonlinear engine for Solver Problems that are smooth nonlinear. Select the LP Simplex engine for linear Solver Problems, and select the Evolutionary engine for Solver problems that are non-smooth.

[Download Free Solver For Excel Mac](#)

To access the 'Solver' tool just select 'Excel's 'Tools, Solver ' I am assuming here - that you did not notice this.. /Microsoft Office 2004/Office/Add-Ins/) How can the answer be improved? If you're still using Excel 2008 for Mac, you can download Solver for Excel 2008 here -- but we highly recommend an upgrade to Excel 2011, for many reasons including a better Solver!.. (To verify the 'Solver' tool's existence: 01 Locate and open the 'Microsoft Office 2004' folder (an assumption on my part, since you made no mention of the version of MS Office / Excel you are referring to).

1. [solver excel](#)
2. [solver excel example](#)
3. [solver excel online](#)

Here 'Excel' is version 11 0 Locate and open the 'Office' folder, and then it's 'Add-Ins' folder (.

If you did indeed select the 'Tools, Solver ' Menu item and no 'Solver Parameters' window appears. [Serial para ircap](#)

The screenshot shows the 'Solver Parameters' dialog box in Microsoft Excel. The 'Set Objective' is 'Total_cost'. The 'To:' radio buttons are set to 'Min'. The 'By Changing Variable Cells:' is 'Machines_used_Products_made'. The 'Subject to the Constraints:' list includes:

- Alpha1000s_used <= Alpha1000s_available
- Alpha2000s_used <= Alpha2000s_available
- Alpha3000s_used <= Alpha3000s_available
- Machines_used = integer
- Products_made <= Maximum_products
- Total_made >= Demand

 The 'Solving Method' is set to 'Simplex LP'. The 'Make Unconstrained Variables Non-Negative' checkbox is checked. The 'Solve' button is visible at the bottom of the dialog.

The spreadsheet data is as follows:

Allocation Problem 2 (Multi-period)						
Minimize the cost of operating 3 different types of machines while meeting product demand over a week's time. Each machine has a different cost and capacity. There are a certain number of machines available for each type.						
Information on machines						
	Initial cost per day	Additional cost per product	Products per day (Max)	Number of machines
